User Testing Feedback

Main Menu

- Make the ‘type name’ text flashing or glowing so people don’t skip over it

Spring

- Ancient Mage says to follow the ‘golden arrow’, but we changed it to a compass, so update the text to match.
- Write [E] in front of the field note name boxes so the user knows how to interact with it (similar to how the artifacts are now)
- Add space bar to exit artifacts
- Add [E] on final boss name and remove the % text in the name box

Summer

- When you spawn in and are ‘talking’ to the warriors, they are not standing there. Change so that they are by the portal, tell you their first blurb, then guide you to the first task (walk with you), then talk to you again about what you need to do on that task (dialogue stays the same, but this way the character is actually present when they are talking.
- The woman warrior’s head is blocked by the text bubble
- Add a text box above the target telling you to interact with it [E]
- Make the text boxes fo the ‘sun,’ ‘seed,’ and ‘leaf’ to be smaller because there is a lot of white space and they overlap
- Take out the s at the end of ‘Ambros’s message’ at the message post for consistency (Ambros’s -> Ambros’)

Fall

- Like summer, Emberfist is not at the portal when he is supposedly talking to you. Have him start at the portal with the first bit of conversation, then when he’s done talking he walks to the next area and talks again and you can follow him.

Winter

- Change Little Mage’s initial position to be slightly down from where it is now because he is kind of standing on top of the portal
- The entrance to the echo chamber should be automatic. Instead of having to interact to enter, you should automatically be brought to that area like all of the previous portals have worked. Once you enter, then the little mage can say his thing instead of before you enter.
- You can walk behind the image of the cave, make sure the barrier stops this from happening

Echo Chamber

- Change the music to something more intense since it’s the final level
- When trying to interact with the Echo Keeper, the Little Mage started saying something completely off topic - remove that

- Activity 5: Add a note clarifying that the user needs to click the box multiple times to go through the answer options
- When clicking return after getting the certificate, that should take you to the main menu page, not back to playing the game since it's finished.

General

- Add in cut scenes at beginning and end
- Remove 'courage,' it doesn't add anything meaningful and confuses players on why they need it
- The big mail envelopes by the field notes can be removed - you don't interact with them but users think they need to since they are so large
- On the left where it says "0/10 Found," update it to be more specific so users know what it is talking about (for ex: "0/10 Artifacts")
- In spring after you get an answer right it says "Correct!" and then the little text about why the answer was right, but it does not do that for all of the rest of the levels. Add it so that it's more consistent and so that users know they answered correctly.
- When answering questions, it says 1/1 correct, 2/2 correct. Change this so that the total always stays the same. So if there are 5 questions total and you just got the first one right, it should say ⅕ correct instead of 1/1 correct. Update for all levels
- Every single thing that you can interact with should have an [E] before the name of it - right now the item has its name over the top of it and then there is ANOTHER pop up when you get close that has the [E]. This is not right, we do not need two pop ups with the same name on them. Just modify the name tag that's already above the item to have the [E] in front. Remove all of the additional ones that pop up when you get near the item.
